ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| | . : ARHAM (+923351328979) | . . : AIZA WRITES

OBJECTIVEs

1.	is the criterion or standard by which the result is judged. Dependent Variable		
2.	Following are the factors affecting internal validity except. Chemical Loss		
3.	is ability to generalize experimental findings to real situations. External Validity		
4.	Response of the are required to the experimental treatment. Test Units		
5.	is the study of documents through which the writer tries to communicate. Content Analysis		
6.	Coding the visible, surface content in a text is called Manifest Coding		
7.	The critical thing about measures is that the people being studied are not aware of their social behavior or actions naturally. Non-Reactive		
8.	refers to information gathered by someone other than the researcher conducting the present study. Secondary Data		
9.	Researchers combine part of experiment together into a Experimental Design		
10.	The type of research that entails observation of events in natural settings end the direct involvement of the researcher. Field Research		
11.	Deception and Confidentiality are Ethical Dilemmas of Field Research		
12.	Cause and effect relationship can also be contaminated by the effects of the passage of time is Uncontrollable Variable		
13.	Which of the following is/are variety / varieties of non- reactive observations? Physical Traces		
14.	Quantitative research produced hard data numbers. It follows a approach to research in which the researcher speaks the language of variables and hypothesis. Positivist		
15.	Those being studied are not aware that they are part of research project. Non-Reactive Research		
16.	Non-reactive research includes: Largely Based on Positivist Principles, Quantitative		
17.	Testing Effect include Pretests		
18.	In, one experimental group and one control group can be given the both pretest and the posttest and other two groups will be given only the posttest. Solomon Four Group Design		
19.	categories of a variable are a common data transformation. Combining		
20.	involves assigning numbers or other symbols to answers so the responses can be grouped. Coding		
21.	is the process of checking and adjusting the data for omissions, legibility, and consistency.		
	Editing		
22.	Pretests are given to subjects (questionnaire) in effect. Testing		
23.	A common error in the reliability and validity of secondary data is Fallacy of Misplaced Concreteness		
24.	The type of research that involves comparison of social forms and their development processes across cultures over a period of time is called Historical Comparative Research		
25.	Ethical dilemmas of field research in the of a field researcher in the social lives of other people. Direct Personal Involvement		

BT406 – RESEARCH METHODOLOGY & SKILL ENHANCEMENT ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| | . : ARHAM (+923351328979) | . . : AIZA WRITES

26.	Following are steps in the field research except. Enter the field adopt a social role and fight with the members
27.	also referred to as field research, ethnography, or anthropological study. Observation Studies
28.	Ethical Dilemmas of Field Research are 1-Confidentiality 2-Deception 3-Involvement of researcher in the social lives of people
29.	Adopt a learn the ropes, and get along with members. Social Role
30.	Preexisting versus created roles to the roles chosen because of age, race, gender, attractiveness. Limits
31.	is the method of doing historical research or of gathering and analyzing historical evidence. Historiography
32.	Max Weber used the German term verstehen Understanding
33.	Sources of historical-comparative research data: 1-Primary sources 2-Secondary sources 3Running records 4-Recollections
34.	Also, the Complete observer, observer as participant, participant as observer, complete participant. Level of Involvement
35.	Social research is used except Increase Social Problems
36.	Max Weber used the German term verstehen, its mean? Understanding
37.	All of the following are how a researcher can develop Relations in the field, except. Watch, Listen, and Collect Quality Data
38.	Which of the following best describe secondary data? Information Collected by Both the Main Researcher and Other People
39.	In the conclusions section of an industry-based case study, the recommended action plan is fully analyzed in terms of its: Viability, Feasibility, And Benefit to The Company
40.	Field research is more flexible or less structured then research. Quantitative
41.	A focus group discussion is a group discussion of persons. 6-12
42.	Duration of is between one hour to one hour and a half. FGD
43.	The should be written only after the rest of the report is completed. Summary
44.	It is difficult to pin down a specific definition of because it is more of an orientation toward research than a fixed set of techniques to apply. Field Research
45.	The makeup of the report one of the following is not prefatory part. General Tables
46.	is a form of social inquiry that focuses on the way people interpret and make sense of the experiences and the world in which they live in. Qualitative Research
47.	In the inquirer focusses on the stories told from the individual and arranges three stories in
-	chronological other. Narrative Research
48.	usually mean the researcher's act to find out what people do. Observation
49.	phenomenology is focused less on the interpretations of the researcher and more on
	description of the experiences of participants. Transcendental or Psychological

BT406 – RESEARCH METHODOLOGY & SKILL ENHANCEMENT ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| | . : ARHAM (+923351328979) | . . : AIZA WRITES

50.	A/an is a form of narrative study in which the researcher writes and records the experiences of another person's life. Biographical Study		
51.	An inductive and systematic methodology in social science involving the construction of theory through the analysis of data. Grounded Theory		
52.	·		
53.	In the inquirer focusses on the stories told from the individual and arranges three stories in chronological other. Narrative Research		
54.	usually mean the researcher's act to find out what people do. Observation		
55.	The study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. Phenomenology		
56.	is understood as a spoken or written text giving an account of an event/action or series of events/actions, chronologically connected". Narrative		
57.	The intent in ethnography is to determine How the Culture Work		
58.	The ethnography is a traditional approach used by cultural anthropologists. Realist		
59.	Ethnography is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values, behaviors, beliefs, and language of a Culture-Sharing Group		
60.	In step first, researchers determine if a case study approach is appropriate to the Research Problem		
61.	interviewing is interviewing with an interview guide. Semi-Structured		
62.	The critical thing aboutmeasures (i.e., the measures that are not obtrusive or intrusive) is that the people being studied are not aware of it but leave evidence of their social behavior or actions 'naturally." Non-Reactive or Unobtrusive		
63.	The data collection in case study research is typically extensive, drawing on multiple sources of information, expect. Blogs		
64.	In data collection in qualitative research, following are the types of informal interviewing. Unstructured Interviewing, Semi-Structured Interviewing		
65.	Procedure that ensures certain characteristics of a population sample will be represented is Quota Sampling		
66.	is a Unit about which information is collected and is the basis of analysis. Element		
67.	Variables occur in some specified manner without implying that one causes the other. Co-Relational Hypothesis		
68.	within clusters but homogeneity between clusters. Heterogeneity		
69.	No control over the variables. Report only what has happened or what is happening. Ex-Post-Facto Design		
70.	The best known probability sample, in which each member of the population has an equal probability of being selected. Simple Random		

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| | : ARHAM (+923351328979) | 💪: AIZA WRITES

/ 1.	is called Purposive Sampling		
72.			
73.	Stratification is usually more efficient statistically than simple random sampling and at worst it is to it. Equal		
74.	Consumer index price (CPI) is a measure of Inflation		
75.	In probability, sampling every element in the population has a known Non-Zero Probability of Selection		
76.	The purpose of data editing is to ensure the of the data. Completeness, Consistency and Readability		
77.	The editor may have to some data. Reconstruct		
78.	• A is a measure in which the researcher captures the intensity, direction, level or potency of a variable construct. Scale		
79.	Sampling intervals are used in the Systemic Random Sample		
80.	Quota sampling can be considered as a form of Proportionate Stratified Sampling		
81.	 Confidentiality and deception are ethical dilemmas associated with 		
82.	In historical research the various sources of data are following except. Observations		
83.	Among the following is not a stage in data analysis. Stratification		
84.	The stratification in random sampling is done because of the following except. Develop A System for The Selection of Elements Instead of Random Numbers		
85.	Sequential sampling is similar to purposive sampling with one difference. To Collect the Cases Until Desired Number of Sample Are Collected		
86.	The final stage in the coding process is Data Cleaning		
87.	The stratification in random sampling is done because of the following except. Develop A System for The Selection of Elements Instead of Random Numbers		
88.	Multistage area sampling is Blocks—Houses in The Block—Individuals in The House		
89.	are often measured at the interval or ratio level. Indexes		
90.	is the most are at the ordinal level of measurement. Scale		
91.	Aims of "research proposal" include all. Convince the Reviewers About the Capability of The Researcher		
92.	is the document that presents a plan for a project to reviewers for evaluation. Research		
	Proposal		
93.	What is an observation tool in research? Questionnaires		
94.	Techniques for narrowing a topic into a research question are, except. Apply to A Specific Fact		
95.	The concept for the phenomenon not the phenomenon itself, hence it may call Abstraction of Empirical Reality		
96.	Following are the types of variable in research except. Confirmation Variable		

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| | . : ARHAM (+923351328979) | . . : AIZA WRITES

97.	Theoretical framework of research, why is the important to make an inventory of proposition. Build Up the Theory		
98.	In a survey, if answers to some questions are missing but, in some cases, answer is necessary the		
	editor put in the Plug Value		
99.	A is a collection of characters that represent a single type of data. Field		
100.	• A is a set of rules stating that certain numbers are assigned to variable attribute. Coding Procedure		
101.	• Some common types of graphic presentations are Histograms, Bar Chart, And Pie Chart		
102.	Famous software used for data presentation known as SPSS stands for Statistical Package for		
	The Social Sciences		
103.	The in-house editor task is to ensure that inconsistent or contradictory response to Adjusted		
104.	The contingency table is widely used. These tables are based on cross-tabulation. Bivariate		
105.	Another situation an editor may face is the need to rearrange the answer to an open response to a question this is called Editing Question Answer Out of Order		
106.	The purpose of field editing is to catch and clarify responses that are logically or conceptually inconsistent. Technical Omissions		
107.	In some cases, the respondent may have answered only the second portion of a two-part question. This type of editing is called asEditing for Completeness		
108.	The process of changing data from original form to a form that is more suitable to perform data analysis is called as Data Transformation		
109.	There are two basic rules for code construction. First the coding categories should be Second, the coding categories should be Exhaustive, Mutually Exclusive		
110.	$\underline{}$ is the process of checking and adjusting the data for omissions, legibility and consistency. Editing		
111.	Combine several specific pieces of information into a single score or measure. All pieces measure the same construct is Uni-Dimensionality		
112.	Presented data have to be interpreted. The means explain meanings of Interoperation, Data		
113.	to percentage a bivariate table: by row, column, and for the total. Three Ways		
114.	When early reviewing of the data is not possible, is done. In-House Editing		
115.	Pretests and Posttests are performed to measure during an experiment. Dependent Variable		
116.	Classical experiments design entails pretests and posttests. True		
	The researchers have created numerous and to measure social phenomenon. Scales, Indexes		
	The purpose of experimental research is to allow the researcher to control the research situation so		
	that casual relationships among may be evaluated. Variables		
119.	A/Anis a measure in which a researcher adds or combines several distinct indicators of a		
	construct into a single score? Index		
120.	is also called haphazard or accidental or grab sampling. Convenience Sampling		

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

121.	For the presentation of data, tables are frequently constructed in research. Which of the following is not a part of table? Regression
122.	to making inferences pertinent to the meaning and implications of the research
	investigation and drawing conclusion. Interpretation Refers
123.	When the bivariate table suggests independence of X and y but the relationship appear in one or more
	partials. The Suppressor Variable Pattern
124.	Key component of reflective practice2
125.	Stages of ghayle's processof learning
126.	Learning theory tells that experiences are not only shared but constructed through reflection Dewey's
127.	Who provide 18 coding Glaser
128.	Philosophical position between positivist and post modern researchers Constructivist Design
129.	7 th step in action research
130.	Which is not related to 4D cycle of appreciative theory Deliver
131.	Soar is the abbreviation of Strength Opportunities Aspirations And Results.
132.	3 Stages of boud model reflection Reflection, Learing & Experience.
133.	External barrier to reflection Learning Environment.
134.	Modern teacher is Innovative
135.	(What is good and what is bad experience) is related to which stage of Gibbs model Evaluation
136.	Combine several specific pieces of information into a single score or measure. All pieces measure the
	same construct is Uni-Dimensionality
137.	Classical experiments design entails pre-tests and post-testsTrue
138.	Field research is more flexible or less structured then Research. Quantitative
139.	A/an is a form of narrative study in which the researcher writes and records the experiences of
	another person's life Biographical Study
140.	In some cases, the respondent may have answered only the second portion of a two part question.
	This type of editing is called asEditing For Completeness
141.	Consumer index price (CPI) is a measure ofInflation
142.	Qualitative research produces data while quantitative research produces dataSoft, Hard
143.	The entire culture-sharing group in ethnography may be considered a case, but the intent in
	ethnography is to determine how the culture works rather than to understand an issue or problem
	using the case as a specific illustration. Case Study
144.	PHENOMENOLOGY is the Qualitative Research

SUBJECTIVEs

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

1. What is Research?

The systematic investigation into and study of materials and sources in order to establish facts and reach new conclusions.

2. What Is the Degree of Abstraction?

Degree of Abstraction

Moving up the ladder of abstraction, the basic concept becomes more abstract, wider in scope, and less measurable.

3. What Are Four Main Dimensions?

- Purpose of doing research.
- Intended uses of research.
- \circ How it treats time \rightarrow time dimension.
- The research techniques used

4. Three Responsibility of Participant?

No physical harm, discomfort, pain, embarrassment, or loss of privacy. Follow three guidelines:

- Explain study benefits.
- Explain respondent rights and protections.
- Obtain informed consent

5. <u>Difference Between Cross Sectional Studies & Longitudinal Studies</u>

Cross-Sectional Studies are carried out once and represent a snapshot of one point in time. Data are collected just once, perhaps over a period of days or weeks or months, in order to answer the research question.

Longitudinal Studies are repeated over an extended period. The advantage of longitudinal studies is that it can track changes over time. For example, the researcher might want to study employees' behavior before and after a change in the top management, so as to know what effects the change accomplished. Here, because data are gathered at two different points in time, the study are not cross-sectional or of the oneshot kind, but is carried longitudinally across a period of time. Such studies, as when data on the dependent variable are gathered at two or more points in time to answer the research question, are called longitudinal. Longitudinal studies can be panel studies and cohort studies which were discussed earlier.

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

6. Theoretical Framework and Its Basic Point?

A good theoretical framework identifies and labels the important variables in the situation that are relevant to the problem identified. It logically describes the interconnections among these variables

- Make an inventory of variables
- Specify the direction of relationship
- Give a clear explanation of why we should expect the proposed relationships to exist.
- Make an inventory of propositions
- Arrange these propositions in a sequential order 6. Schematic diagram of the theoretical model be given.

7. Several Way to Protect Confidentiality in Research?

Obtaining signed nondisclosure documents. Restricting access to respondent 's identification Revealing respondent information only with written consent. Restricting access to data instruments where the respondent is identified. Non-disclosure of data subsets.

8. Characteristic of Scientific Method?

Special Features of Scientific Method

Empirical

Observable phenomenon

Verifiable

- Use senses to confirm or refute the observation.
- "Sensory experiences"
- Intuitions and revelations are out.
- Replicability needed.

Cumulative

- o Knowledge grows.
- o Need not start from scratch.

Deterministic

- o Explains why things happen?
- Parsimony
- o Minimum No. of variables that explain variance.
- o Ethical and ideological neutrality Value free. Objectivity. Is it possible?
- Statistical generalization
- Rationalism

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

- o Employ rigorous rules of logic.
- o Argumentation.

9. Importance Theory of Science

- Theory as orientation. Framework. Phenomenon may be studied in different ways
- Narrows the range of facts to be studied. Study of football. Theory as conceptualization and classification. Provides concepts
- Theory in summarizing role. Empirical generalizations
- Theory predicts facts. Extrapolation.
- o Theory points gaps in knowledge

10. Three way of gaining research literature

Computer: on line systems.

- Scholarly journals.
- Books containing reports of original research, or collection of research articles.
- READERS or Book of Readings.
- Dissertations.
- Government documents

11. How to Locate Research Report.

- **₹** Locate Research Reports:
- Articles in scholarly journals.
- Locating the relevant articles is difficult.
- Many academic fields have "abstracts" or "indexes" for scholarly literature
- Look in reference section of library
- Also available on computer.

12. Sources of Concepts:

- We create concepts from personal experience. Mass, speed, family.
- We borrow from other disciplines.
- We develop a specialized jargon or terminology for a particular subject.

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

13. What Is Dependent Variable and Independent Variable?

Dependent and Independent Variable

Dependent Variable (DV) \rightarrow Outcome variable \rightarrow effect variable (Y). Variation in Y is influenced by some other factor (s)

Independent Variable (IV) \rightarrow (X) that influences the Y.

The variance in Y is accounted for by X.

14. Observation Tools

- Questionnaire
- Interview schedule
- Interview guide
- Check list
- Researcher will specify the instrument along with justification of its appropriateness.

15. Double Sampling

- When further information is needed from a subset of the group from which some information has already been collected for the same study.
- Want to examine the matter in more detail.
- Sub-sample of the primary sample

16. Define Statistics

Different Meanings:

- Set of collected numbers (No. of people living in a city)
- Branch of applied mathematics: used to manipulate and summarize the features of numbers.
- Use both. Descriptive statistics often used for univariate analysis.

17. What Is Focus Group Discussion?

- O Discussion of an issue by 6-12 persons assisted by a moderator
- Useful in exploratory research
- Supplements the quantitative information

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📕 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

18. Communication Analysis

- Analyzing the content of text.
- Content refers to words, meanings, pictures, symbols, ideas, themes, messages. Text is anything written, visual, or spoken
- Books, newspapers, advertisements, speeches, official documents, photographs, films, articles of clothing, works of art.

19. Use of Null Hypothesis?

Use of Null Hypothesis:

- Used for testing the research hypothesis
- Researchers give more importance to negative evidence. No relationship rather than a relationship i.e., Null hypothesis.
- Reject H0 and accept alternative.

20. Purposive Sampling

- Researcher lays down the criteria for the subjects.
- Also called as judgmental or expert opinion sample. Selection depends upon the judgment of selector.

21. Note on Sampling Unit?

Sampling Unit

- That element or set of elements considered for selection in some stage of sampling.
- Sampling can be single stage or multistage. Simple or complex.
- In single stage, sampling units are the same as elements.
- In multistage, different levels of sampling units may be employed. Sampling of Mohallahs, the of households, and then adults. Primary, secondary, final.

22. Main Point of Conceptual Model?

Conceptual Model

- Researcher elaborates the relationship among the variables.
- Explains the logic underlying these relationships.
- Describes the nature and direction of the relationships

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

23. What Are the Criteria of The Sample Design?

Appropriate Sample Design

Depends upon a number of criteria like:

- Degree of accuracy.
- Resources.
- Advance knowledge of population.
- National vs. local project. Geographic proximity of population.
- Need for statistical analysis. Projecting beyond the sample or the sample only.

24. Write A Note on Several Ways Protect the Confidentiality Research

- > Several ways to protect the confidentiality
- > Obtaining signed nondisclosure documents.
- Restricting access to respondent's identification
- Revealing respondent information only with written consent
- Restricting access to data instruments where the respondent is identified.
- O Nondisclosure of data subsets.

25. <u>Differentiate Between Descriptive And Exploratory Research Also Write Their Goals Separately?</u>

Exploratory Research:

- Initial research conducted to clarify and define the nature of the problem. Exploring a new topic.
- Specifically, there could be number of goals of exploratory research.

Goals of Exploratory Research:

- Become familiar with the topic. Develop well-grounded picture of the situation.
- Develop tentative theories.
- Determine the feasibility of study.
- Formulate questions and refine issues for more systematic inquiry.
- Develop techniques and a sense of direction for future research

Descriptive Research:

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

- Research designed to describe characteristics of the phenomenon understudy.
- Helps in diagnostic analysis

Goals of Descriptive Research:

- Describe the situation/characteristics. Provide an accurate profile of a group.
- Give a verbal or numerical picture (%).
- Present basic background information
- Create a set of categories or classify.
- o Clarify sequence, set of stages.
- Focus on 'who', 'what', 'when', 'where' and 'how' but not on 'why'.

26. Two Basic Rules for Code Construction

- Coding categories should be exhaustive i.e., coding category provided for every possible response.
- Coding categories should be mutually exclusive and independent.

27. Difference Between Survey Interview and Field Research Interview

Survey Interview

- It has a clear beginning and end.
- The same standard questions are asked and in same sequence.
- Interviewer appears neutral at all times.

Field Interview

- The beginning and end are not clear.
- Questions and order are tailored to specific people and situations.
- Interviewer shows interest in responses, encourages elaboration.

28. Difference B/W Indexes and Scales

- Indexes and scales often used interchangeably.
- Scale is a measure to capture the intensity, direction, level, or potency of a variable. Arranges responses on a continuum. A scale can use single indicator or multiple indicators. Ordinal level.
- Index is a measure in which researcher adds or combines several distinct indicators of a construct into a single score. Composite score.

29. How Can We Categorize Descriptive Statistics Give Example?

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

Descriptive statistics are used to describe or summarize data in ways that are meaningful and useful. For example, it would not be useful to know that all of the participants in our example wore blue shoes. Central tendency describes the central point in a data set. Variability describes the spread of the data.

30. What Points Should One Keep in Mind While Putting Other Research Work Done in Table?

- Give each table a number.
- Give each table a title.
- Label the row and column variables, and give name to each of the variable categories.
- Include the totals of the columns and rows. These are called as marginal.
- Each number or place that corresponds to the intersection of category for each variable is cell of a table.
- Missing information to be given under the table

31. Write Three Types of Controls

- Manipulation: control over stimulus/treatment.
- Holding conditions constant i.e., control over the environment (the confounding factors).
- Control over the composition of groups balancing. Find out the way that individual differences do not confound the X variable under investigation. Randomization is the answer.

32. <u>Limitations of Trivariate Table</u>

Limitations

- Difficult to interpret if control variable has more than four categories
- Total number of cases may be limiting factor because cases are divided into cells in partials. Thinning out of data.
- On average 5 cases per cell recommended.

33. 3 Steps in Conducting an Experiment:

- Begin with a hypothesis.
- Decide on an Exp design to test H.
- O Decide how to introduce X.
- Develop a measure of Y.

34. Sampling Bias.

Only well-educated people will write. Views of poorly educated people are not there.

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

35. Use of Secondary Data: Existing statistics/ Documents

Secondary Data

- Variety of data collected by others and available to researchers for further analysis
- Data available in the form of statistical documents (books, reports). Also computerized records.
- Data collected by large bureaucratic organizations. Data gathered for policy decisions or as a public service.
- Time bound collection of information (pop. Census) as well as over long periods (unemployment, crime rates)
- Comparisons over time, across the countries

36. Explain Validity Problems in Secondary Data?

- Researcher's theoretical definition may not match with government agency or organization that collected the data. Unemployed.
- Researcher lack control over how the data were collected. Data collection as part of job. No quality control systematic errors. Typographical errors.

37. Define Double Blind Experiment

Double blind experiment: to control experimenter expectancy. Both the subjects and experimenters are blind to details of experiment.

38. Validity in Experiments

- Validity refers to confidence in cause-and-effect relationship.
- Internal validity is high in Laboratory experiments. Controlled environment.
- External validity (generalizability) is not sure. Organizational or field setting. Several confounding variables. Field experiments have more external validity but less internal validity.
- First have lab experiments then test in field setting.

39. External Validity

- Even if the researcher eliminates all concerns for internal validity, external validity remains a potential problem.
- External validity is the ability to generalize experimental findings to real life situations.
- Without external validity, findings are of little use for both basic and applied research.
- Threats to external validity: Reactivity

ALL OBJECTIVEs & SUBJECTIVEs FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

40. <u>Define Historiography?</u>

Historiography is the method of doing historical research or of gathering and analyzing historical evidence.

41. What Is Running Record?

Files or existing statistical documents maintained by organizations. Vital statistics.

42. Ethnography and Entho- Methodology

Ethnography and Ethno-methodology

Ethno means people distinct by their culture.

Graphy refers to description. Understanding the culture of people.

Methodology: how people create reality as well as its interpretation. Meanings attached to a reality.

43. Define Field Research/ Observation Studies

Observation can be participant or non-participant.

In participant observation the researcher directly observes and participates in small scale social settings in the present time.

Also referred to as ethnography, or anthropological study. Direct, face to face interaction with "real people" in a natural setting. A group who interacts with each other on regular basis in a fixed setting: street corner, tea shop, a club, nomads, village.

44. What Are Two Method of Describing the Data?

Qualitative Research: Qualitative research produces soft data: impressions, words, sentences, photos, symbols. Interpretative approach. Non-linear approach (spiral)

Quantitative Research: Quantitative research produces hard data: numbers. Follow positivist approach. Speak the language of variables and hypotheses. Emphasis on precise measurement of variables and testing hypotheses. Look for causality. Linear approach (sequential steps)

45. Quality of Evidence?

Evaluating the Quality of Evidence

Researcher has two questions in mind:

How relevant is the evidence?

How accurate and strong is the evidence?

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

Question of relevance is difficult – with the shift in focus, the relevance of evidence may change. Accuracy is looked for: the implicit framework, particular details (that are required), and empirical generalizations.

46. What Researchers Do in Field?

- Observes ordinary events and everyday activities as they happen in natural settings, in addition to unusual occurrences.
- Becomes directly involved with people being studied and personally experiences the process of daily life in the field setting.
- Acquires an insider's point of view while maintaining the analytic perspective or distance of an outsider.
- Uses a variety of techniques and social skills in a flexible manner as the situation demands.
- Produces data in the form of extensive, written notes, as well as diagrams, maps, pictures to provide very detailed descriptions
- Sees events holistically (as a whole unit) and individually in their social context.
- Understands and develops empathy for members in a field setting, and does not just record 'cold' objective facts.
- Notices both explicit (recognized, conscious, spoken) and tacit (less recognized, implicit, unspoken) aspects of culture.
- Observes ongoing social processes without upsetting, or imposing an outside point of view.
- Copes with high levels of personal stress, uncertainty, ethical dilemmas, and ambiguity.

47. Steps of Report Writing?

Every report is custom-made, yet some conventions of format.

Many companies and universities also have in-house, suggested report formats or writing guides that researchers should be aware of.

Report Format

- The general plan of organization for the parts of a written or oral research report. Tailoring the format to the project -- 2 reasons:
- To obtain the proper level of formality.
- To decrease the complexity of the report.

48. Note on Parts Of Reports?

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

The makeup of the report – the report parts:

- Prefatory parts
- Main body
- Appended parts

Prefatory Parts

- o Title fly page.
- Title page.
- Letter of transmittal
- Letter of authorization.
- Table of contents
- Executive summary (Synopsis):
- Objectives
- Results
- Conclusions
- Recommendations

Main Body

- o Introduction:
- Background
- Objectives
 - Methodology.
- \circ Results \rightarrow can be divided into different areas.
- Limitations.
- Conclusions and recommendations
- References.
- Acknowledgements.

Appended Parts

- Data collection forms (questionnaires, check list, interview guide, other forms).
- Detailed calculations.
- General tables.
- Other support material.
- o Bibliography, if needed.

49. <u>Data Collection Method?</u>

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

Data collection methods. Primary or secondary data used. How primary data were collected – survey, experiment, observation. Multiple techniques used – triangulation.

50. Explain Function of Record in Focus Group?

Keep a record of the content as well as emotional reactions and nature of group interactions.

Record the following:

- Date, time, and place.
- Names and characteristics of participants.
- Description of group dynamics

51. What Are Limitations of Focus Group Discussion?

Limitations

- The moderator may influence the participants (bias).
- FGDs have limited value in exploring complex beliefs of individuals.
- FGDs can paint a picture of what is socially acceptable in a community rather than what is actually occurring or believed. (Real and ideal problems)

52. The Purpose Of FGD?

- To obtain in-depth information on concepts, perceptions, and ideas of the group.
- More than a question-answer interaction.
- Group members discuss the topic among themselves.

53. Explain 3 Characteristics of Case Study

Case Study

- A comprehensive description and analysis of a single situation or number of specific situations i.e., cases.
- An intensive description and analysis of a case.
- Often use qualitative approach to explore the case in as rich a detail as possible.
- Explore new areas of inquiry.

54. Reference and Bibliography?

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

A **BIBLIOGRAPHY** is the listing of the works that are relevant to the topic of research interest arranged in alphabetical order of the last names of authors.

A **REFERENCE** list is a subset of the bibliography, which includes details of all the citations used in the literature survey and elsewhere in the report, arranged again, in the alphabetical order of the last names of authors.

55. What Are Procedures for Implementing Narrative Research?

The procedures for implementing this research consist of focusing on studying one or two individuals, gathering data through the collection of their stories, reporting individual experiences, and chronologically ordering (or using life course stages) the meaning of those experiences.

56. Enlist 5 Qualitative Research John W Creswell In His Book?

Five qualitative research methods are discussed in this subject as discussed by John W. Creswell in his book. Following are the five qualitative research methods:

- Narrative Research
- Phenomenology
- Grounded Theory
- Ethnography
- Case Study

57. <u>Different Qualitative and Quantitative Research with Example?</u>

What Is Narrative Research & Phenomenological Study?

Narrative Research

"Narrative is understood as a spoken or written text giving an account of an event/action or series of events/actions, chronologically connected".

The procedures for implementing this research consist of focusing on studying one or two individuals, gathering data through the collection of their stories, reporting individual experiences, and chronologically ordering (or using life course stages) the meaning of those experiences.

Phenomenology

A phenomenological study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon.

The basic purpose of phenomenology is to reduce individual experiences with a phenomenon to a description of the universal essence.

58. Challenge Faced in The Narrative Research

Challenges

- The researcher needs to collect extensive information about the participant, and needs to have a clear understanding of the context of the individual's life.
- It takes a keen eye to identify in the source material gathered the particular stories that capture the individual's experiences.
- Active collaboration with the participant is necessary, and researchers need to discuss the participant's stories as well as be reflective about their own personal and political background, which shapes how they "restore" the account.
- Multiple issues arise in the collecting, analyzing, and telling of individual stories.

59. Two Type of Phenomenology?

Types of Phenomenology

Two approaches to phenomenology are highlighted in this discussion:

Hermeneutic Phenomenology

Empirical, transcendental, or psychological phenomenology

 Hermeneutical Phenomenology describes research as oriented toward lived experience (phenomenology and interpreting the "texts" of life (hermeneutics) as available in blogs and tweets etc.

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

• Transcendental or Psychological Phenomenology is focused less on the interpretations of the researcher and more on a description of the experiences of participants.

Challenges of Phenomenology

- Phenomenology requires at least some understanding of the broader philosophical assumptions, and these should be identified by the researcher.
- The participants in the study need to be carefully chosen to be individuals who have all experienced the phenomenon in question, so that the researcher, in the end, can forge a common understanding.
- Bracketing personal experiences may be difficult for the researcher to implement.
- An interpretive approach to phenomenology would signal this as an impossibility for the researcher to become separated from the text.

60. Types of Narrative Research

- A Biographical Study is a form of narrative study in which the researcher writes and records the
 experiences of another person's life.
- Autobiography is written and recorded by the individuals who are the subject of the study.
- A Life History portrays an individual's entire life, while a personal experience story is a narrative study of an individual's personal experience found in single or multiple episodes, private situations, or communal folklore.
- An **Oral History** consists of gathering personal reflections of events and their causes and effects from one individual or several individuals.

61. What Is Case Study Research Explain with Its Procedure?

Study of an issue explored through one or more cases within a bounded system over time, through detailed, in-depth data collection involving multiple sources of information

- It as a methodology, a type of design in qualitative research, or an object of study, as well as a product of the inquiry.
- Espouses both quantitative and qualitative approaches to case study development and discusses explanatory, exploratory, and descriptive qualitative case studies.
- Procedures for conducting a case study:
- First, researchers determine if a case study approach is appropriate to the research problem
- Researchers next need to identify their case or cases
- The data collection in case study research is typically extensive, drawing on multiple sources of information
- The type of analysis of these data can be a holistic analysis of the entire case or an embedded analysis of a specific aspect of the case.

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

 The researcher reports the meaning of the case, whether that meaning comes an instrumental case or an intrinsic case.

62. Challenges of Ground theory

A grounded theory study challenges researcher for the following reasons:

- The investigator needs to set aside, as much as possible, theoretical ideas or notions so that the analytic, substantive theory can emerge.
- The researcher faces the difficulty of determining when categories are saturated or when the theory is sufficiently detailed.
- The researcher needs to recognize that the primary outcome of this study is a theory with specific components: a central phenomenon, causal conditions, strategies, conditions and context, and consequences.

63. Types of Grounded Theory?

The two popular approaches to grounded theory are the systematic procedures of Strauss and Corbin (1990, 1998) and the constructivist approach of Charmaz (2005, 2006).

- In the more **systematic**, the investigator seeks to systematically develop a theory that explains process, action, or interaction on a topic.
- Charmaz"s approach is known as the constructivist grounded theory method as it adheres to a constructivist philosophical approach, wherein both the researcher and participants mutually coconstruct meaning during data collection and analysis.

64. <u>Difference Between Realistic and Critical Ethnography</u>

- The **realist ethnography** is a traditional approach used by cultural anthropologists. It reflects a particular stance taken by the researcher toward the individuals being studied
- The **critical ethnography** involves the authors advocate for the emancipation of groups marginalized in society

65. Explain Participant and Non-Participant Observation Study?

Participant Observation is immersion in a culture. Ideally, the ethnographer lives and works in the community for six months to a year or more, learning the language and seeing patterns of behavior over time. Long-term residence helps the researcher internalize the basic beliefs, fears, hopes and expectations of the people under study. (1989:45)

ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

| 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

Non-Participant Observation involves merely watching what is happening and recording events on the spot. "Non-participant observation exists only where interactions are viewed through hidden camera and recorder or through one-way mirror" (1984: 143).

66. Challenges In Implementing Case Study

Challenges:

- The case study researcher must decide which bounded system to study
- The researcher must consider whether to study a single case or multiple cases.
- Selecting the case requires that the researcher establish a rationale for his or her
- Purposeful sampling strategy for selecting the case and for gathering information about the case.

67. Types of Case Studies:

- In Single Instrumental Case Study, the researcher focuses on an issue or concern, and then selects one bounded case to illustrate this issue.
- In Collective/Multiple Case Study, the one issue or concern is again selected, but the inquirer selects multiple case studies to illustrate the issue.
- In Intrinsic Case Study, focus is on the case itself because the case presents an unusual or unique situation.

68. External Validation of Research?

External validation of research involves the assessment and verification of study findings by independent experts or researchers outside the original research team. This process enhances the credibility, reliability, and generalizability of results, as it ensures that conclusions are not biased or limited to a single perspective. Peer review, replication studies, and critical feedback from the scientific community are common methods of external validation. This rigorous evaluation helps to establish the robustness and validity of research outcomes, fostering trust in the scientific process and advancing knowledge in the respective field.

69. <u>5 Qualitative Research. Methods By Jhon W Creswell?</u>

John W. Creswell, a prominent qualitative researcher, has contributed various qualitative research methods to the field. These include:

- Narrative Inquiry: Focuses on participants' stories to understand experiences.
- Phenomenology: Explores participants' lived experiences to identify essential themes.
- Grounded Theory: Develops theories from data, identifying patterns and relationships.
- **Ethnography:** Immerses in a culture to gain deep insights into participants' perspectives and behaviors.

ALL OBJECTIVEs & SUBJECTIVEs FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

• Case Study: In-depth examination of a single or few cases to gain comprehensive understanding.

Creswell's methods emphasize context, participants' viewpoints, and the researcher's role, enhancing the richness and depth of qualitative research.

70. Linear Negative Relationship And Linear Position Relationship?

A Linear Negative Relationship refers to a consistent decrease in one variable's value as another variable increases, following a straight line pattern on a graph. In contrast,

A Linear Positive Relationship implies a consistent increase in one variable as another variable increases. Linear position relationship involves the sequential arrangement of data points along a straight line, indicating a clear progression or order between variables. Both linear relationships provide insights into how changes in one variable are associated with changes in another, aiding in understanding patterns and trends in various fields, such as economics, science, and social sciences.

71. Structured Interview And Semi Structured Interview?

Structured interviews involve predetermined, standardized questions asked in a fixed order, promoting consistency and comparability. Researchers often use them to gather specific information and facilitate quantitative analysis. In contrast,

Semi-structured interviews blend predefined questions with open-ended ones, allowing flexibility and deeper exploration of participants' perspectives. This approach suits qualitative research, enabling nuanced insights and context-rich data.

Both interview types offer distinct advantages:

Structured Interviews ensure uniformity, while **Semi-Structured Interviews** foster in-depth understanding. Choosing between them depends on research goals, the depth of inquiry required, and the level of flexibility desired in engaging with participants.

72. Role Of Theory In Science?

The role of theory in science is pivotal as it serves as the framework for understanding, explaining, and predicting natural phenomena. Theory provides a systematic and organized representation of observed patterns, guiding scientific inquiry and interpretation. It helps researchers conceptualize complex relationships, offering a roadmap to explore uncharted territories. Theories generate hypotheses, directing empirical research and experimentation, while also enabling the establishment of general principles and laws. Furthermore, theories promote coherence within a field, facilitating communication and collaboration among scientists. As knowledge advances, theories may evolve or be refined, contributing to the growth of scientific understanding. They play a critical role

BT406 – RESEARCH METHODOLOGY & SKILL ENHANCEMENT ALL OBJECTIVES & SUBJECTIVES FROM PAST FILES FOR FINAL TERM

📗 🖳 : ARHAM (+923351328979) | 🐔: AIZA WRITES

in advancing knowledge, shaping research agendas, and driving innovation across various disciplines, ensuring that scientific endeavors are grounded in a structured and informed approach.

73. Scale And Index?

A Scale is a measurement tool that assigns values to objects or variables according to a defined set of criteria, allowing for quantitative comparison.

An **Index** is a composite measurement created by combining multiple variables or indicators to represent a broader concept or phenomenon, often used to assess complex constructs.

علم وہ نہیں جو آپ نے سکھاہے علم تو وہ ہے جو آپ کے عمل و کردار سے ظاہر
